Rail-held canvas

Front wind
resistance up to
70 Km/h*
up to Beaufort
Scale 8

Frama is glad to introduce technological **evolution applied to full closure** vertical awnings.

► Closer FR5900

The ideal wind and rainproof solution!

Frama is glad to introduce **Closer FR5900**: the first full closure vertical awning that boasts **wind resistance up to 70 Km/h** (much higher than Beaufort scale class 3) for its largest size version measuring 450x300 cm.

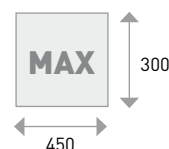

Full length rails fitted with a reliable aluminium rod system hold the canvas in position, for **silent and precise** sliding; in addition, a special technical solution **guarantees acoustic insulation** under all conditions, even when the **front bar** is hit by wind.

Each rail is made up of two profiles, and the protection box steel heads are specifically designed for housing the rails themselves; the result is **easier and faster** installation.

Closer FR5900 meets any design requirement with the wide RAL colour range, for customising frames, and countless canvas options from Frama's vast selection of fabrics and PVC in various colours, matched with transparent PVC inserts or windows.

Closer is a **high-performance, reliable and heavy-duty Italian made product**.

In other words, it is manufactured by Frama: protecting your horizons since 1975.

* ALFA version with winch or motor

Closer, drop awnings **designed close to you.**

Clouser drop awnings The evolution of full closure vertical awnings

Clouser: strong points

- Full length rails, fitted with a rigid aluminium rod system, hold the canvas in position;
- **Wind resistance:** up to 70 km/h for largest size 450x300, much higher than class 3;
- Wind-resistant acoustically insulated front bar;
- In unrolling stage, the canvas is maintained in central position between the rails;
- Extruded aluminium box with steel heads designed for housing the rails;
- Ceiling mount with retractable steel brackets inside the box;
- Preassembled and perforated extruded aluminium rails for **easy wall mount**;
- Two-piece rails save time in installation stage;
- End profile steel casting slides ensure **maximum wind resistance**;
- The front bar fitted with ballast, trimmed with a rubber profile for compensating possible gaps between the same and the resting surface, ensures the canvas unrolls perfectly;
- Canvas lock system featuring a stainless steel bolt for fastening the awning at different levels;
- Optional Crystal windows for PVC and Soltis canvases;
- Also available in Country and Futura versions;
- Control system for avoiding canvas is rolled contrariwise;
- **Powered by Somfy.**

▶ 100% Italian design! Enhanced reliability!

All Clouser awnings are installed and tested in production stage before delivery.

Applications

- Perimetral closure for Galileo pergola, openings between columns, closure of wood, aluminium and steel pergolas, restaurants, terraces.
